Summary

Computer Science undergraduate working on agentic AI and AI evaluation for healthcare operations at Confido Health, with hands-on experience building applied AI systems, multi-agent orchestration, and RAG-based platforms.

Education

Charotar University of Science and Technology (CHARUSAT) — Anand, India
B.Tech, Computer Science and Engineering — *2023 – 2027*

Udgam School for Children — Ahmedabad, India
Secondary and Higher Secondary Education — *Completed*

Experience

Product Engineer Intern — Jun 2026 – Present
Confido Health — *Bengaluru, India*
Confido Health builds and deploys AI agents for healthcare operations.

- Worked on the CareOS Evals dashboard: how each practice's AI agents perform, with drill-downs per conversation
- Helped build the use-case Overview, which shows why each task was resolved, handed to staff, or failed
- Contributed to the AI judge that grades conversations; tested changes with blind multi-model reviewers
- Helped build a tool where practice staff describe each agent's workflow in plain steps, so grading follows it
- Worked on an agent sync that flags new, renamed or retired agents for approval, and on fax analytics per location

Product Intern — May 2025 – Mar 2026
Confido Health — *Remote*

- Designed structured prompt systems for AI agents to improve conversation reliability and task completion
- Tested agent workflows against realistic scenarios and pruned non-critical metrics to improve evaluation quality
- Collaborated with product and engineering teams to deploy and iterate AI workflows

Intern — Jun 2023 – Jul 2023
Crest Data Systems — *Ahmedabad, India*

- Assisted in software development and data-related tasks under senior engineers
- Gained exposure to real-world development workflows and corporate engineering practices

Projects

KalExam – AI-Powered Examination & Evaluation Platform | *RAG, Next.js, Async Pipelines* — Ongoing
- Built an AI platform that generates personalized study strategies from syllabus, notes, and past papers

OpenClaw Multi-Agent Orchestration System | *Python, OpenClaw, Automation* — 2025
- Built a Boss–Worker multi-agent system coordinating specialized Main, Coder, Researcher, and Extractor agents

VoiceServe for PetPooja – AI Voice Ordering & Analytics | *FastAPI, Next.js, Supabase* — 2026
- Built an AI-powered voice ordering system with real-time upselling and order automation

Healthcare AI Agent Prompt Generator | *Confido Health, Conversational AI, Prompt Systems* — 2025
- Built a JSON prompt generator that configures AI agents with practice hours and procedures

Mission Control – AI Agent Monitoring Dashboard | *Next.js, Supabase Realtime, WebSockets* — 2026
- Designed a real-time dashboard to monitor agent activity, health, uptime, and system status

HireAI – AI-Powered Job Assessment Platform | *LLMs, Assessment Automation* — 2026
- Implemented job description analysis to generate objective, subjective, and coding assessments

Technical Skills

Core Expertise: Agentic AI, multi-agent AI orchestration, LLM evaluation, conversational AI systems, prompt engineering, AI evaluation workflows
Languages: Python, C/C++, JavaScript (Node.js basics), Bash/Shell scripting, SQL
AI and Computer Vision: OpenCV, face recognition systems, NLP fundamentals (intent classification, entity handling), RAG workflows
Platforms and Tools: Supabase (PostgreSQL/Auth/Realtime), FastAPI, Next.js, Git, GitHub, Retell
